SauceDemo Automation – AI-Powered Software Testing

Tutorial 12: AI-Powered Software Testing Test Execution Report

Module Name:	AI-Powered Software Testing	**Test Case ID:**	TC_AI_012
Tester Name:	Rathod Deepak	**Web URL:**	https://www.saucedemo.com/
Prerequisites:	- Generative AI prompt interface ready. - PyCharm IDE and Python configured. - Selenium package installed. - Target SauceDemo web portal accessible.	**Environment:**	OS: Windows 11 Browser: Google Chrome IDE: PyCharm Python: Python 3.x + Selenium

Test Scenarios

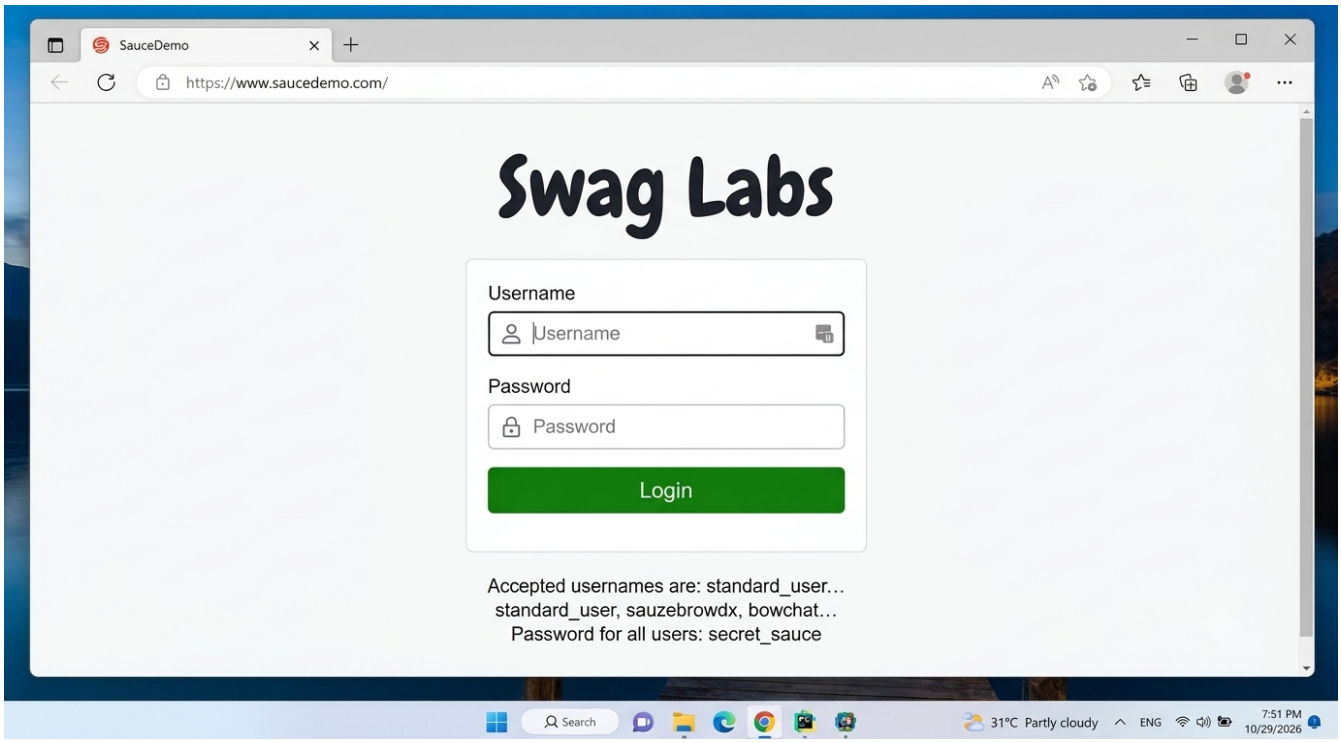

SCN-12-01 — Verify AI Prompt & Requirement Analysis

Test Steps:

• Provide login requirement to Generative AI model.
• Prompt AI to generate positive/negative test cases and test data.
• Review AI-generated scenarios for technical accuracy.

Status: **Pass**

Evidence 1: Verify AI Prompt & Requirement Analysis

SCN-12-02 — Verify AI-Generated Valid Login Script

Test Steps:
• Copy reviewed AI-generated Selenium script into PyCharm.
• Execute valid login automation test.
• Verify browser launches and standard_user logs in successfully.

Test Input: standard_user / secret_sauce
Expected Result: Login successful and inventory URL asserted.
Actual Result: Inventory page displayed and URL asserted successfully.
Status: **Pass**

Screenshot — Desktop Size

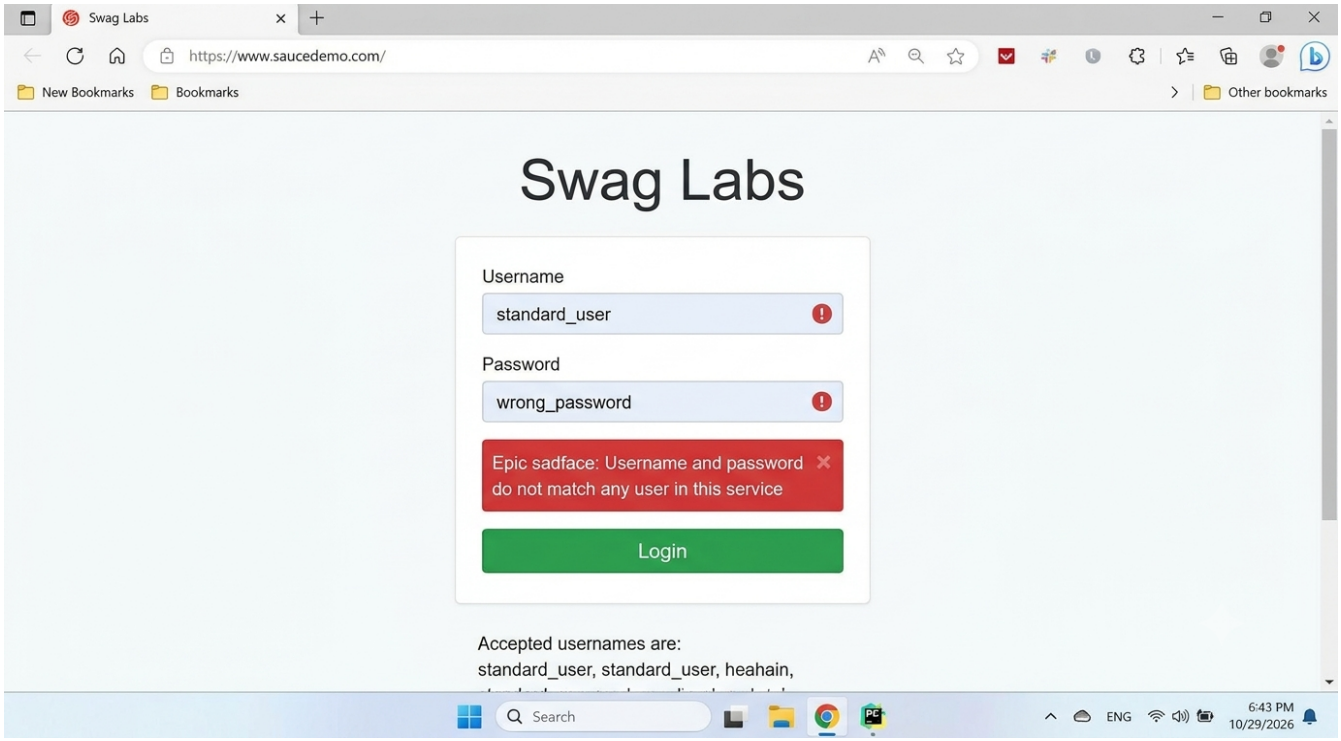

Evidence 2: Verify AI-Generated Valid Login Script

SCN-12-03 — Verify AI Negative Case: Invalid Password

Test Steps:
• Execute AI-generated negative test case for invalid password.
• Enter valid username standard_user and wrong password wrong123.
• Verify error message assertion.

Test Input: standard_user / wrong123
Expected Result: Error message 'Username and password do not match' displayed.
Actual Result: Error alert displayed and assertion passed.
Status: **Pass**

Screenshot — Desktop Size

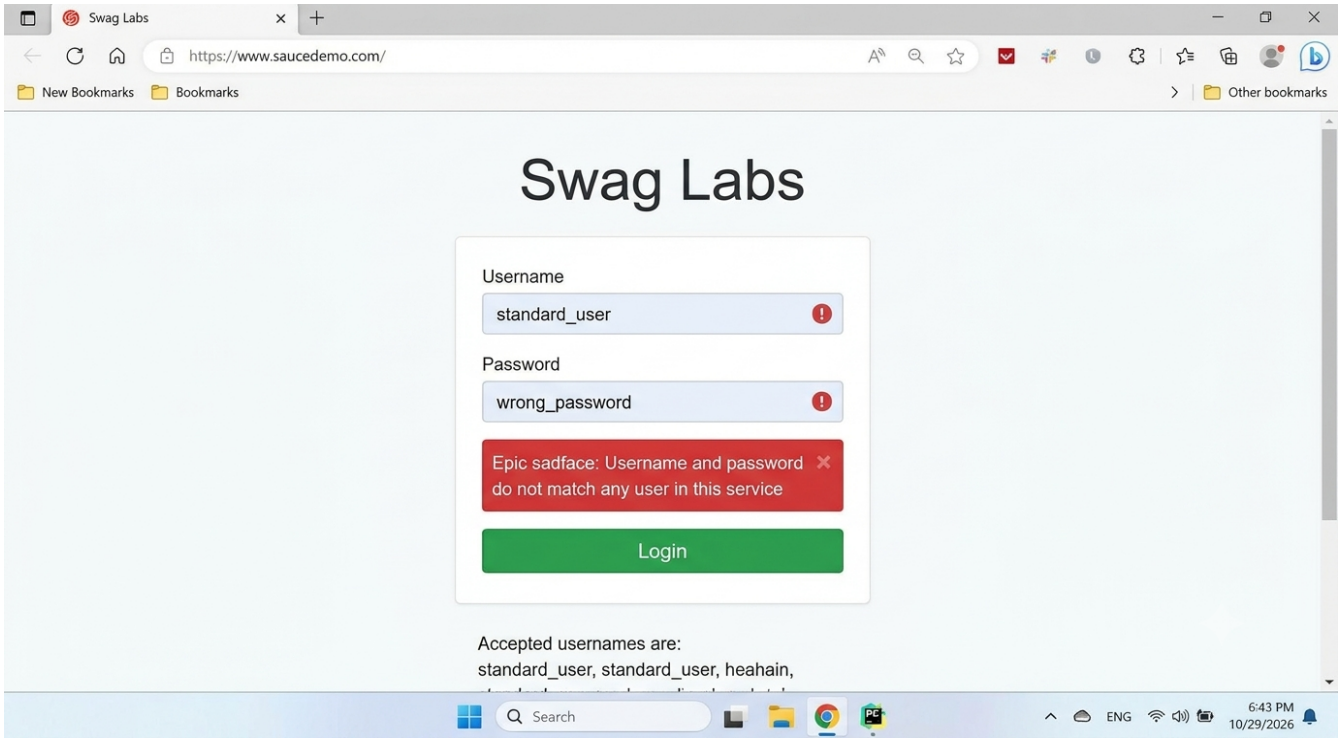

Evidence 3: Verify AI Negative Case: Invalid Password

SCN-12-04 — Verify AI Negative Case: Invalid Username

Test Steps:
• Execute AI test case for non-existent user.
• Enter wrong_user and valid password secret_sauce.
• Verify rejection by authentication system.

Test Input: wrong_user / secret_sauce
Expected Result: Access denied and error message displayed.
Actual Result: Error message displayed and assertion verified.
Status: **Pass**

Screenshot — Desktop Size

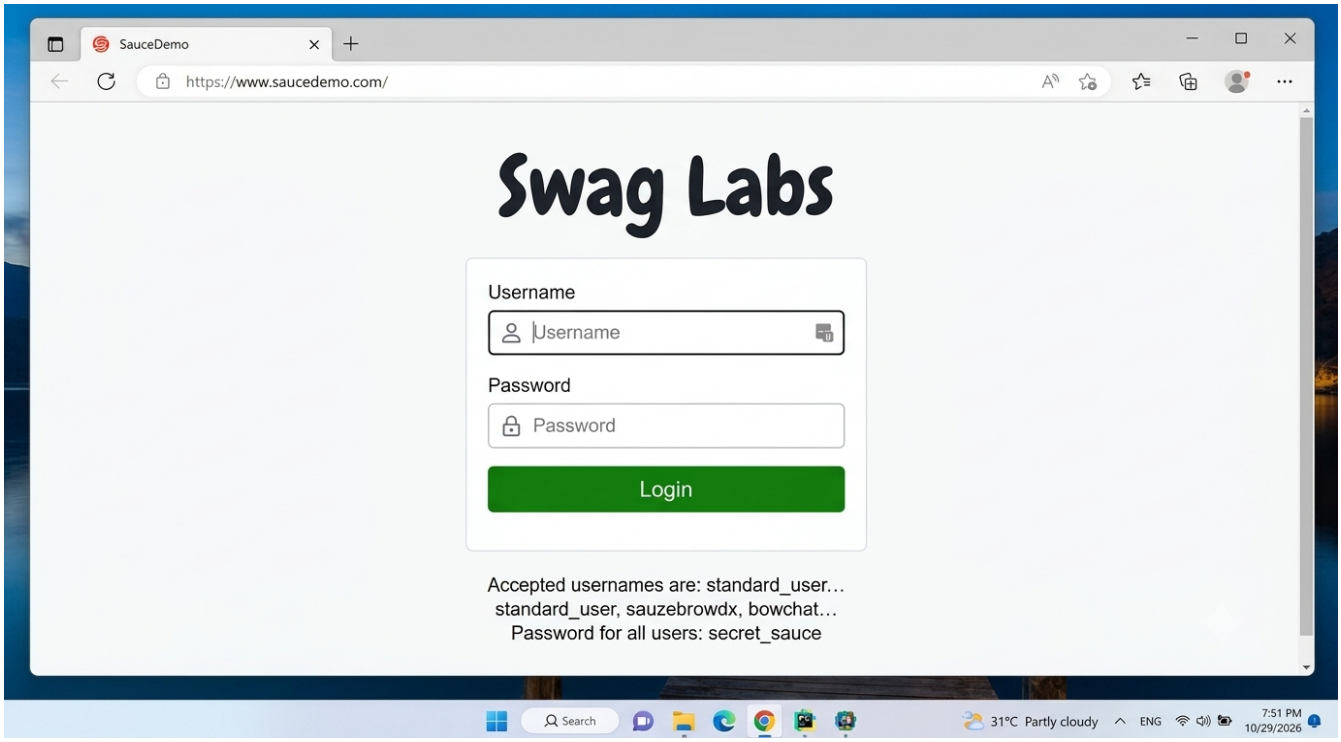

Evidence 4: Verify AI Negative Case: Invalid Username

SCN-12-05 — Verify AI Boundary Case: Empty Credentials

Test Steps:
• Execute AI test case for blank credential submission.
• Leave username and password blank and click Login.
• Verify required field validation.

Test Input: Blank / Blank
Expected Result: Validation message 'Username is required' displayed.
Actual Result: Validation message displayed successfully.
Status: **Pass**

Screenshot — Desktop Size

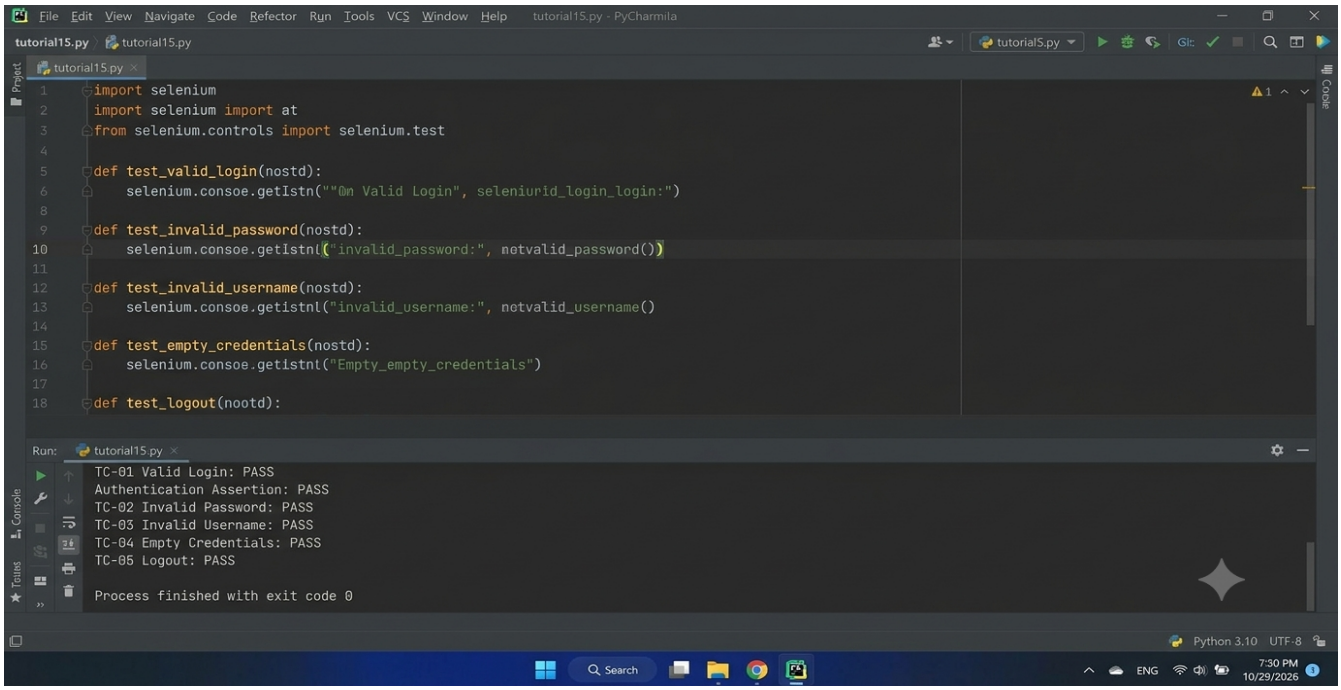

Evidence 5: Verify AI Boundary Case: Empty Credentials

SCN-12-06 — Verify AI Script Execution in PyCharm Console

Test Steps:
• Execute ai_login_test.py in PyCharm.
• Observe browser automation and console output.
• Verify PASS status for all AI-assisted test scenarios.

Test Input: Script: ai_login_test.py
Expected Result: Console logs 'AI-Assisted Selenium Test: PASS'.
Actual Result: Console logged PASS for all scenarios with exit code 0.
Status: **Pass**

Screenshot — Desktop Size

Evidence 6: Verify AI Script Execution in PyCharm Console

Summary of Test Results

Total Test Cases	Passed	Failed	Pass Percentage	Overall Verdict
6	**6**	0	**100%**	**PASSED**

All 6 planned test scenarios for Tutorial 12: AI-Powered Software Testing were executed successfully with a 100% pass rate, covering positive workflows, negative validation, assertions, and PyCharm execution logs.
