SauceDemo Automation – Automated Login Testing

Tutorial 15: Automated Login Testing Test Execution Report

Module Name:	Automated Login Testing	**Test Case ID:**	TC_AUTH_015
Tester Name:	Rathod Deepak	**Web URL:**	https://www.saucedemo.com/
Prerequisites:	- PyCharm + Python + Selenium configured. - Chrome browser installed. - Valid & invalid test credentials available. - SauceDemo site accessible.	**Environment:**	OS: Windows 11 Browser: Google Chrome IDE: PyCharm Python: Python 3.x + Selenium

Test Scenarios

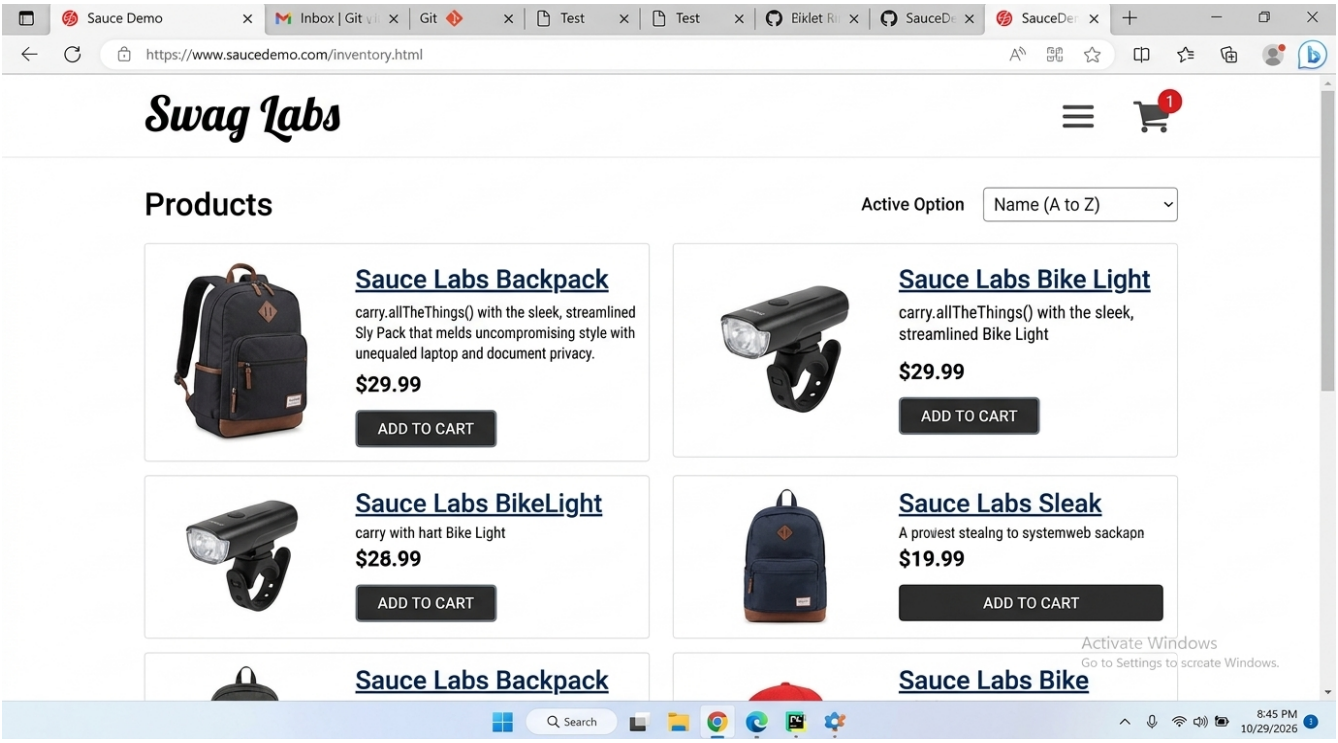

SCN-15-01 — Verify Positive Login Authentication & Title Assertion

Test Steps:

- Open SauceDemo login page.
- Enter standard_user and secret_sauce.
- Click Login.
- Assert 'inventory' in current URL.
- Assert products title text equals 'Products'.

Status: Pass

Evidence 1: Verify Positive Login Authentication & Title Assertion

SCN-15-02 — Verify Negative Authentication: Invalid Password

Test Steps:
• Open login page.
• Enter valid username standard_user.
• Enter invalid password 'wrong_password'.
• Click Login.
• Verify error message text.

Test Input: standard_user / wrong_password
Expected Result: Error 'Username and password do not match any user' displayed.
Actual Result: Error message displayed and assertion passed.
Status: **Pass**

Evidence 2: Verify Negative Authentication: Invalid Password

SCN-15-03 — Verify Negative Authentication: Invalid Username

Test Steps:
• Open login page.
• Enter non-existent username 'wrong_user'.
• Enter valid password 'secret_sauce'.
• Click Login.
• Verify error message.

Test Input: wrong_user / secret_sauce
Expected Result: Error 'Username and password do not match any user' displayed.
Actual Result: Error message displayed and assertion passed.
Status: **Pass**

Screenshot — Desktop Size

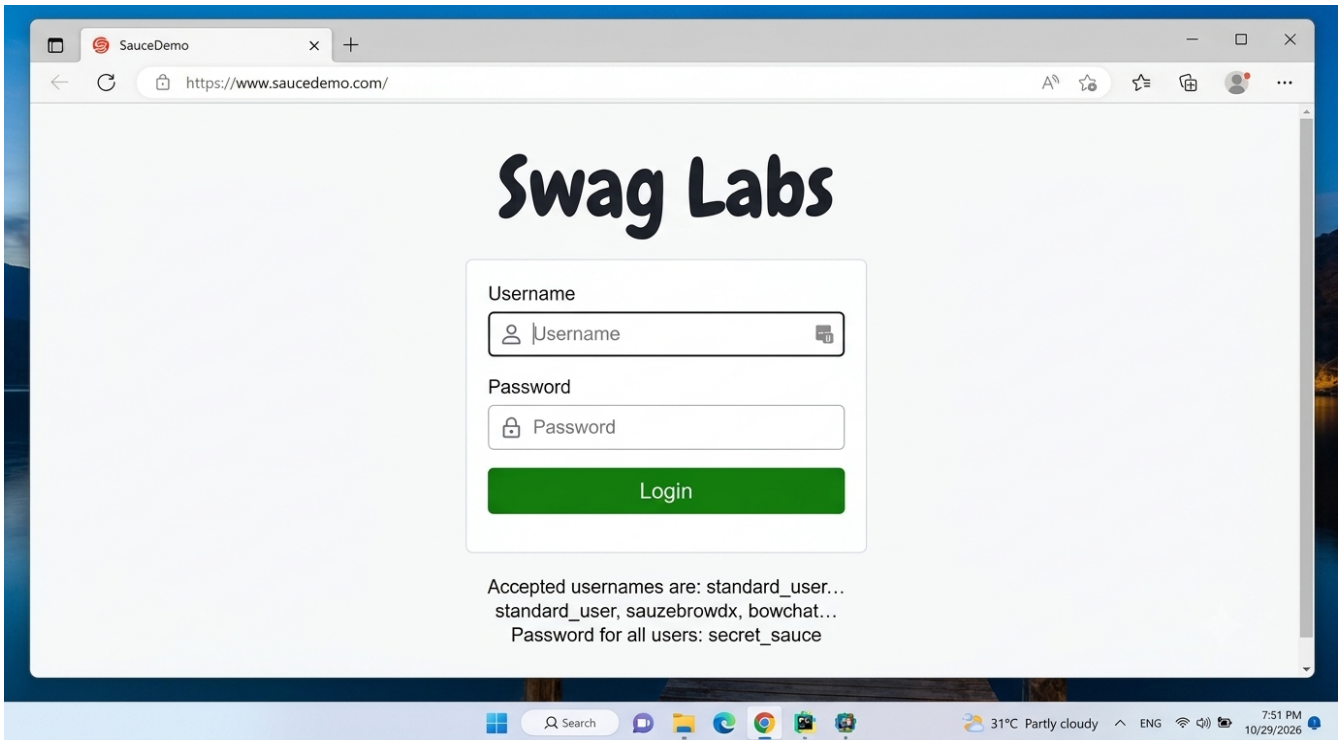

Evidence 3: Verify Negative Authentication: Invalid Username

SCN-15-04 — Verify Validation Assertion: Empty Credentials

Test Steps:
• Open login page.
• Leave both username and password fields blank.
• Click Login button.
• Verify required field assertion.

Test Input: Username: (blank), Password: (blank)
Expected Result: Validation error 'Username is required' displayed.
Actual Result: Validation error displayed and verified successfully.
Status: **Pass**

Evidence 4: Verify Validation Assertion: Empty Credentials

SCN-15-05 — Verify Logout Flow & Session Termination

Test Steps:
• Login with standard_user.
• Click burger menu icon (react-burger-menu-btn).
• Wait for sidebar animation.
• Click 'logout_sidebar_link'.
• Assert redirect to login page.

Test Input: Action: Menu -> Logout
Expected Result: Session terminated and user returned to login page.
Actual Result: Logout completed and login button visible on page.
Status: **Pass**

Evidence 5: Verify Logout Flow & Session Termination

SCN-15-06 — Verify Exception Handling & Console Summary

Test Steps:
• Execute tutorial15.py test suite.
• Verify exception handling blocks (NoSuchElement, Timeout).
• Verify all 5 test functions report PASS in console.

Test Input: Script: tutorial15.py
Expected Result: Console logs PASS for all 5 test cases with 0 unhandled exceptions.
Actual Result: All 5 tests logged PASS and execution completed successfully.
Status: **Pass**

Evidence 6: Verify Exception Handling & Console Summary

Summary of Test Results

Total Test Cases	Passed	Failed	Pass Percentage	Overall Verdict
6	**6**	0	**100%**	**PASSED**

All 6 planned test scenarios for Tutorial 15: Automated Login Testing were executed successfully with a 100% pass rate, covering positive workflows, negative validation, assertions, and PyCharm execution logs.
